17 Questions and problems

1 About the platform

Cold Run Readiness records and controls the inspection of plant equipment after maintenance, before it returns to service. Every discipline fills in its own checklist, failures become tracked defects, and each step is signed off and kept in an audit log that nobody can edit.

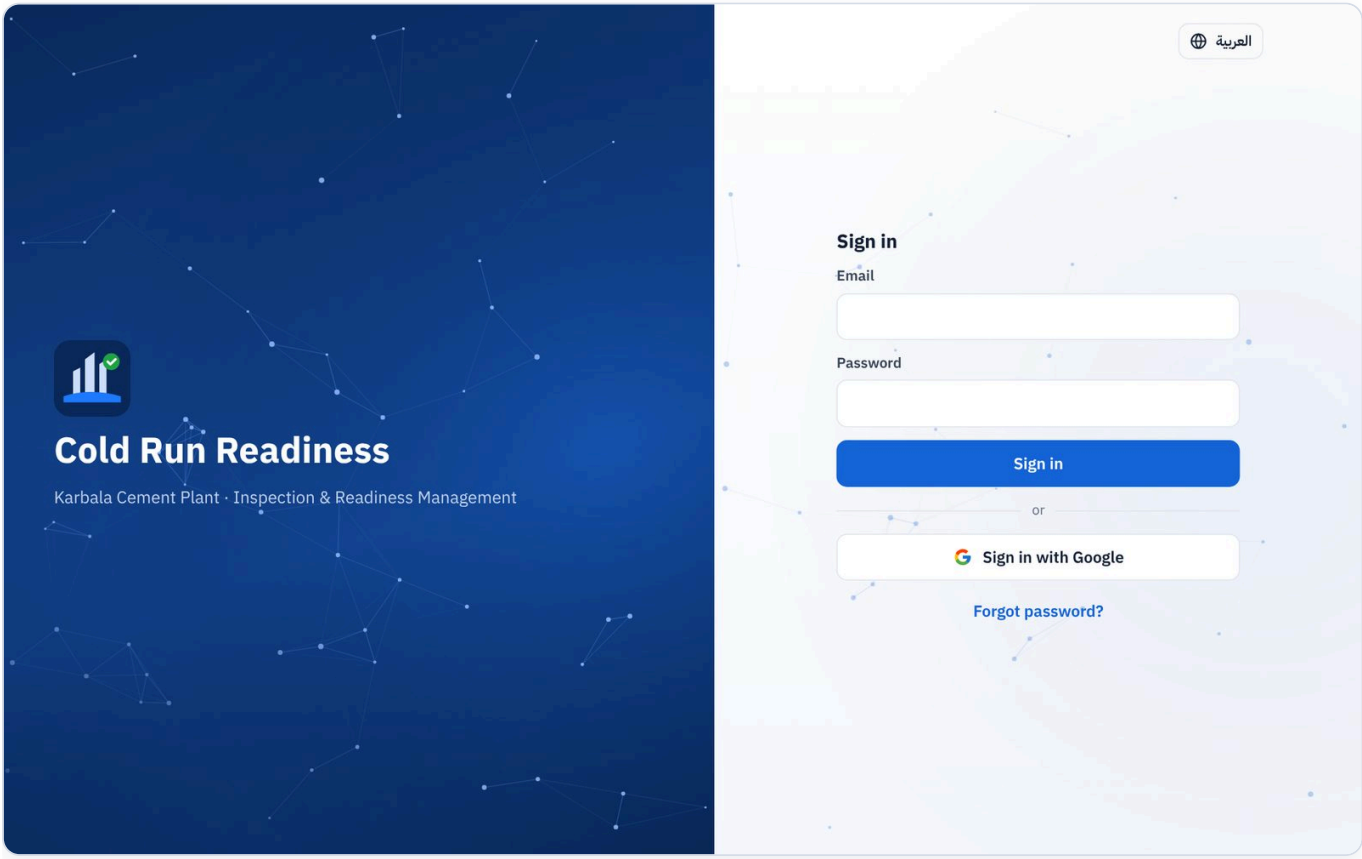

It works in Arabic and English, on phones, tablets and computers, and keeps working without a network connection.

> **Important** The platform documents readiness only. It never authorizes operation, never bypasses interlocks and never replaces LOTO, work permits or the formal operating authorization of the plant.

2 Getting access

For Everyone

Open **https://kcp-coldrun-2026.web.app** in Chrome, Edge or Safari. Your administrator adds you first; you then receive an e-mail to set your password.

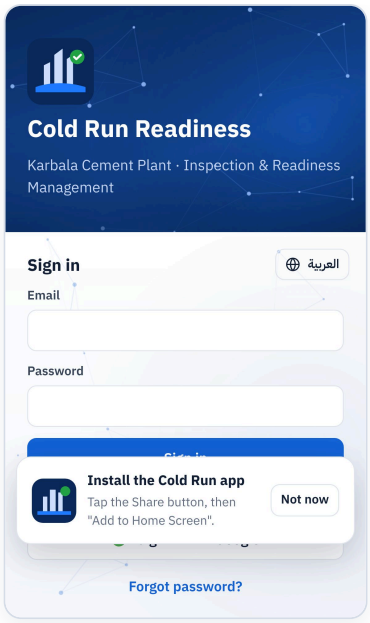

The sign-in page

1. **With a password:** open the e-mail "Reset your password", choose a password of at least 8 characters, then sign in with your e-mail and that password.
2. **With Google:** press **Sign in with Google** and choose the same e-mail the administrator added. If the browser blocks the window, allow pop-ups for the site.
3. **Forgot your password?** Type your e-mail on the sign-in page and press **Forgot password?**.
4. Switch language at any time with the **العربية / English** button at the top.

Install the app

When you open the site, a pop-up offers to install the app. Installed, it opens full-screen from your home screen and works offline.

1. **Android / computer:** press **Install** in the pop-up.
2. **iPhone / iPad:** press the Share button in Safari, then **Add to Home Screen**.

The install pop-up on an iPhone

Tip No signal in the plant? Keep working. Your changes are kept on the device and sent automatically when the connection returns — the sync icon at the top shows while they upload.

3 Roles & privileges

What you can do depends on your role. The same limits are enforced by the security rules on the server, so they cannot be bypassed from a device.

Role	Main job in the platform
System Administrator	Everything, plus users, devices, checklists, equipment and settings.
Department Manager	Creates inspections, signs off for the department, final approval, overrides with justification, receives completion reports.
Shift Supervisor	Creates and runs inspections, assigns and verifies defects, final approval.
Mechanical / Electrical / Instrumentation / Production engineer	Fills in their own discipline's section, reports and repairs defects in their pool, signs off their discipline.
Viewer	Reads everything and exports; cannot change anything.

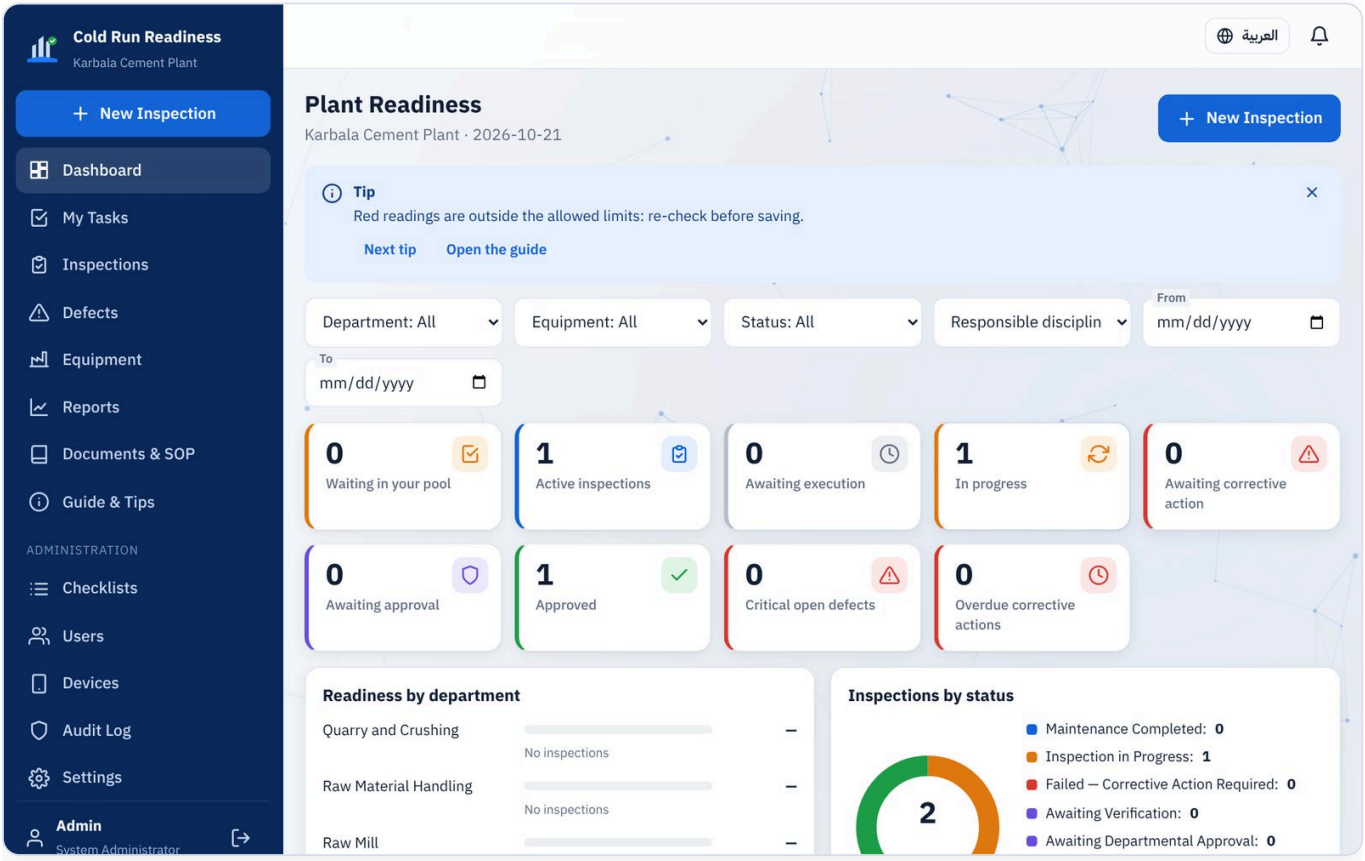

Settings → Roles & privileges shows the full table

4 Your day: Dashboard and My Tasks

For Everyone

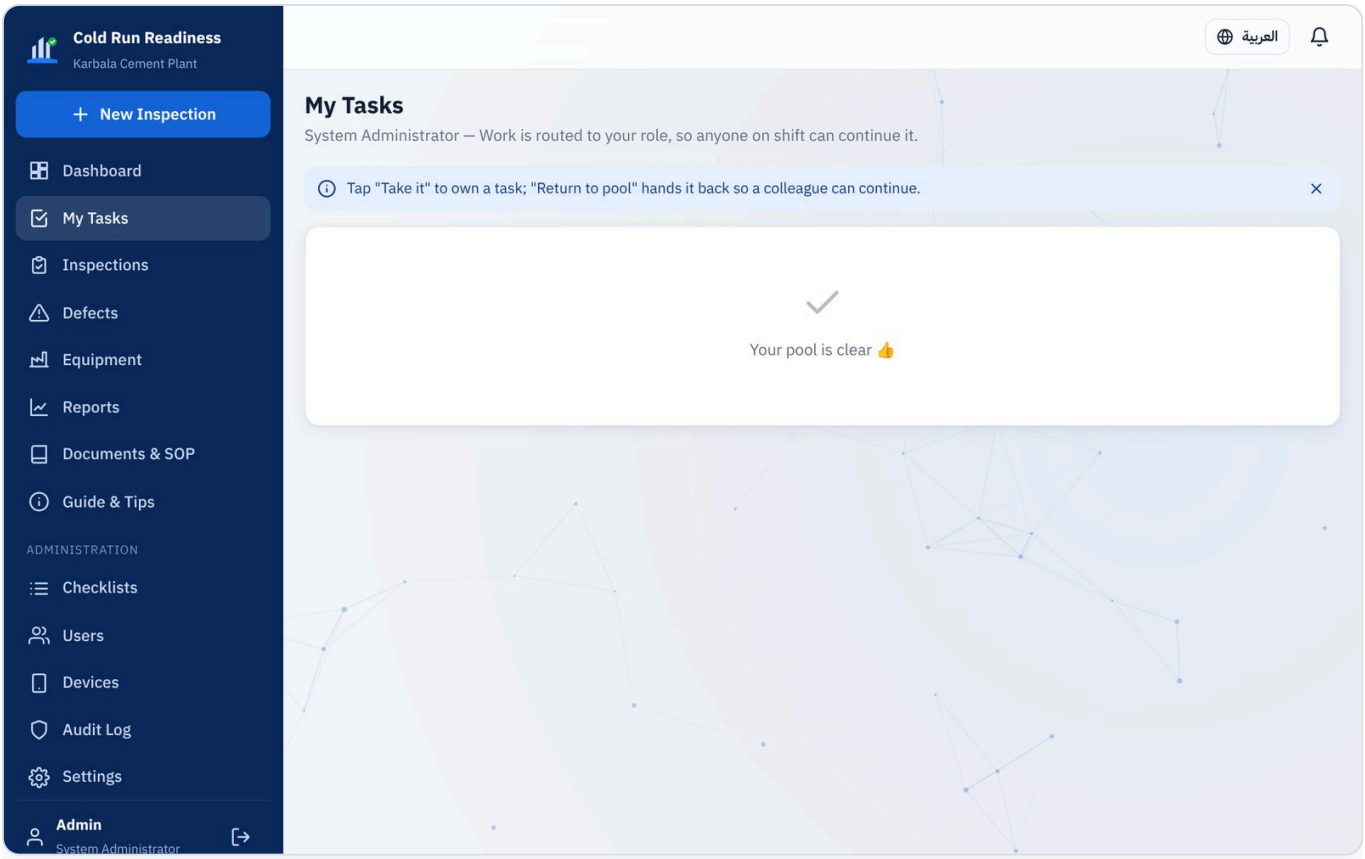

The **Dashboard** shows plant readiness at a glance: inspections by status, open and overdue defects, and readiness by department. A tip card under the title gives short advice for your role.

Dashboard

My Tasks lists only what is waiting for you or your discipline: checklist sections to complete, approvals, defects in your pool and repairs to verify.

1. Press **Take it** to own a task — colleagues see it is yours.
2. Press **Return to pool** to hand it back, e.g. at the end of your shift.

My Tasks

> **Tip** The bell at the top shows your notifications: when you are added to an inspection, a defect is assigned to you, or an inspection is approved.

5 How an inspection moves

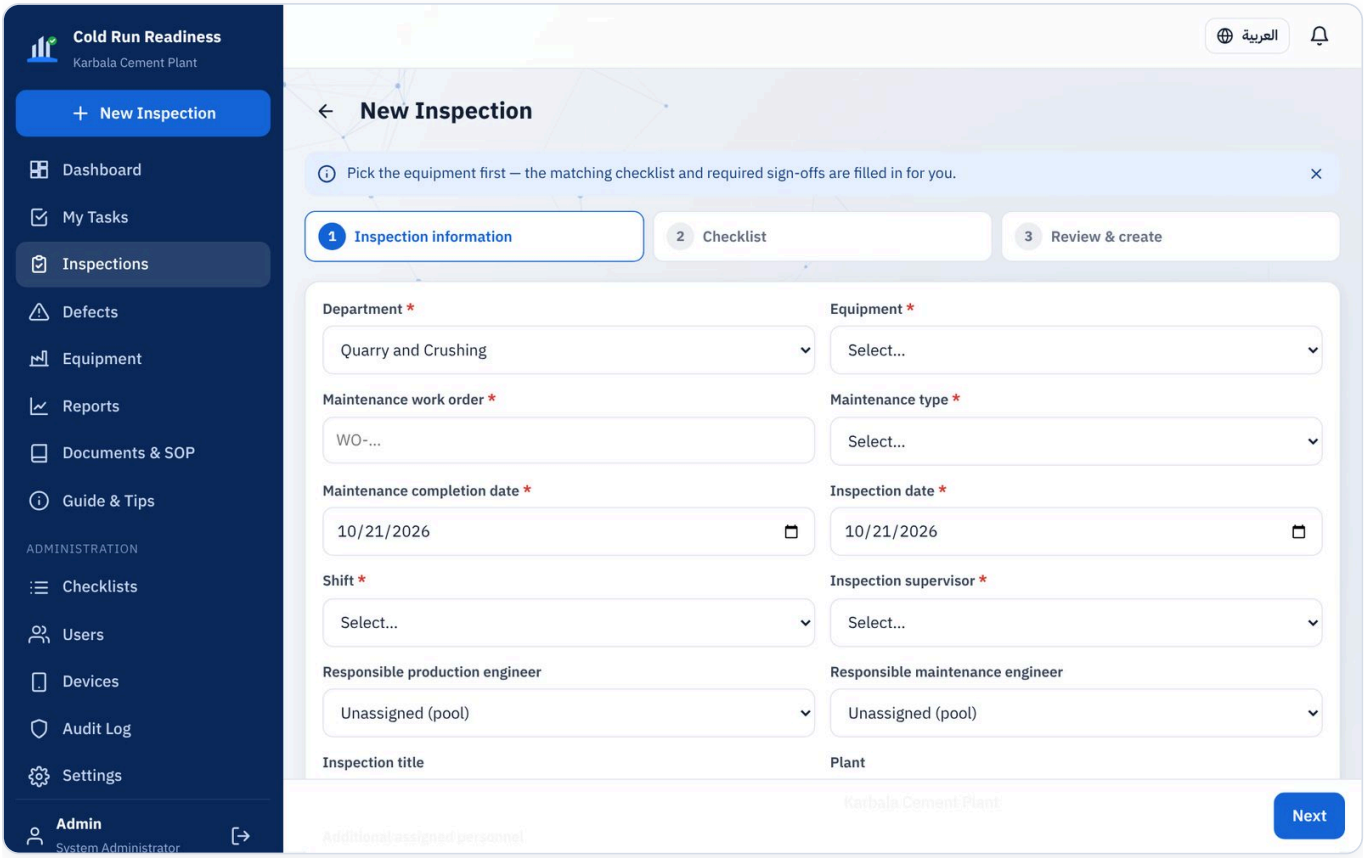

Each inspection shows its status as a coloured badge. The platform moves it forward automatically as work is done:

Status	Meaning
Maintenance Completed	Created; nothing filled in yet.
Inspection in Progress	Items are being filled in.
Failed — Corrective Action Required	At least one defect is open.
Awaiting Verification	Repairs are done and must be verified.
Awaiting Departmental Approval	All items done; disciplines must sign off.
Ready for Authorized Review	Everything signed; waiting for final approval.
Approved for Next Stage	Final approval given; results reported to management.
Rejected / Reopened	Sent back with a reason; work continues.

6 Creating an inspection

For Supervisors, managers, administrators

1. Press **New Inspection** (top of the menu).
2. Choose the **equipment** and the **maintenance type**. The matching checklist and the required sign-offs are loaded automatically.
3. Fill in the work order, dates, shift and the responsible engineers. Add extra people if needed — they are notified.
4. Press **Create inspection**. Each discipline now sees its section in My Tasks.

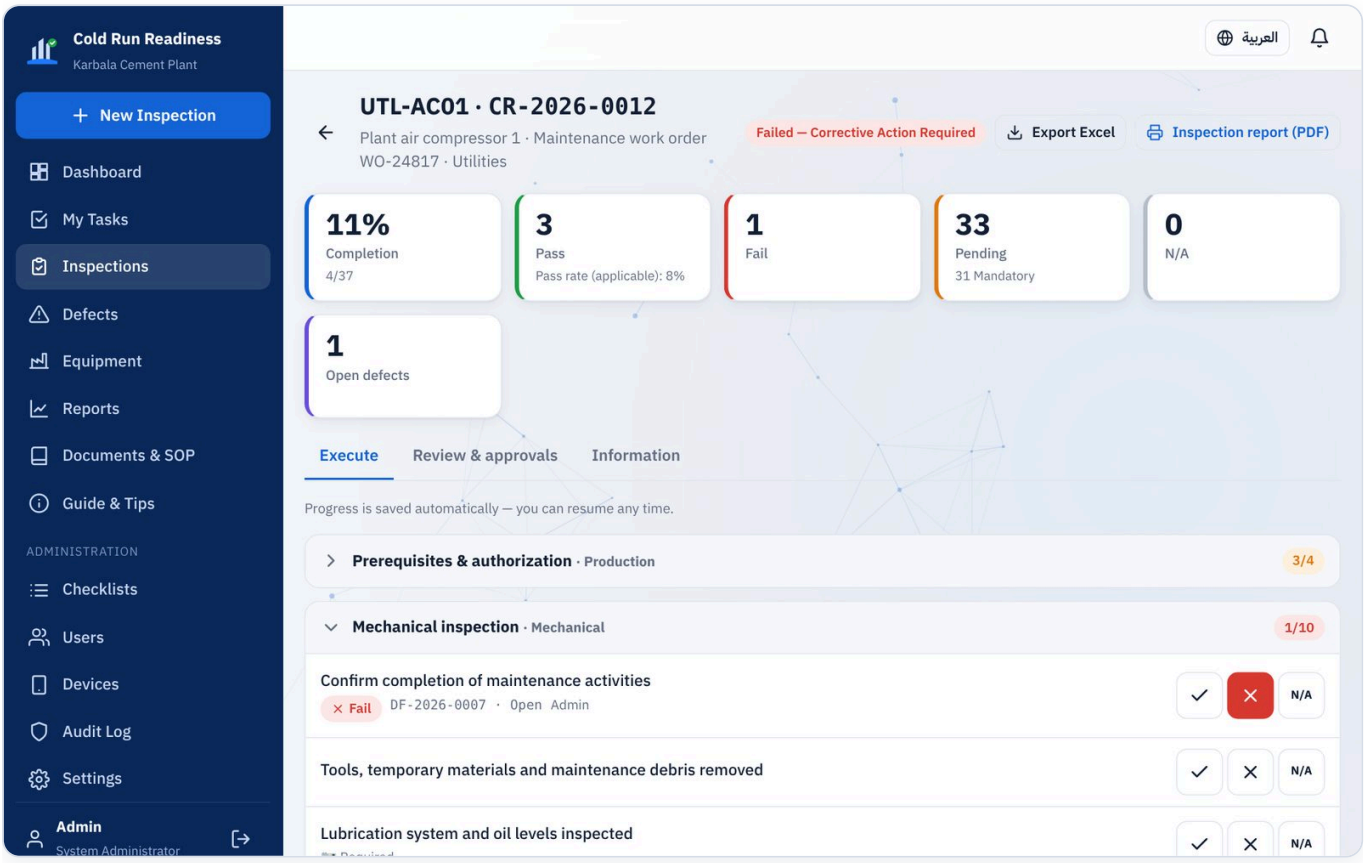

New inspection

Tip If no checklist matches the equipment and maintenance type, ask the administrator to link one (Checklists).

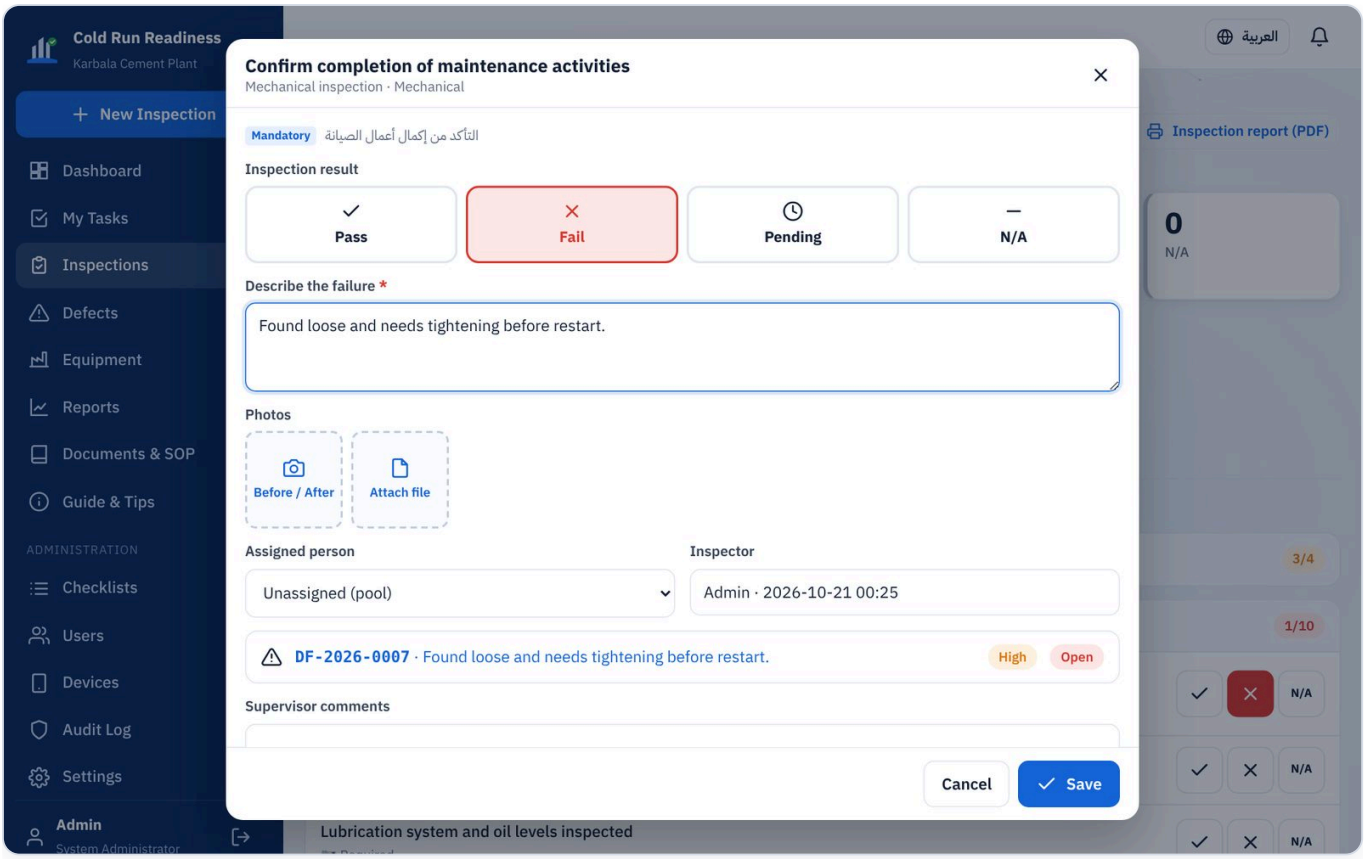

7 Filling in a checklist

For Engineers and supervisors

1. Open the inspection (from My Tasks or Inspections) and stay on the **Execute** tab.
2. Open your discipline's section. Use the quick buttons ✓ / ✕ / N/A, or tap the item to open its full sheet.
3. In the sheet: choose **Pass**, **Fail** or **N/A**; enter the reading when a unit is shown (red = outside the allowed range); add a comment and photos.
4. A **Fail** needs a description. **Raise defect / corrective action** is ticked by default: describe the corrective action and press Save — a defect opens for the responsible discipline. Critical items block approval until fixed.
5. Progress is saved automatically — you can stop and continue any time.

The Execute tab with sections and quick buttons

An item sheet: result, reason, photos and the linked defect

> **Tip** Read the guidance under each item: it explains how to check it. Add a photo to every failure — it saves time for the repair team.

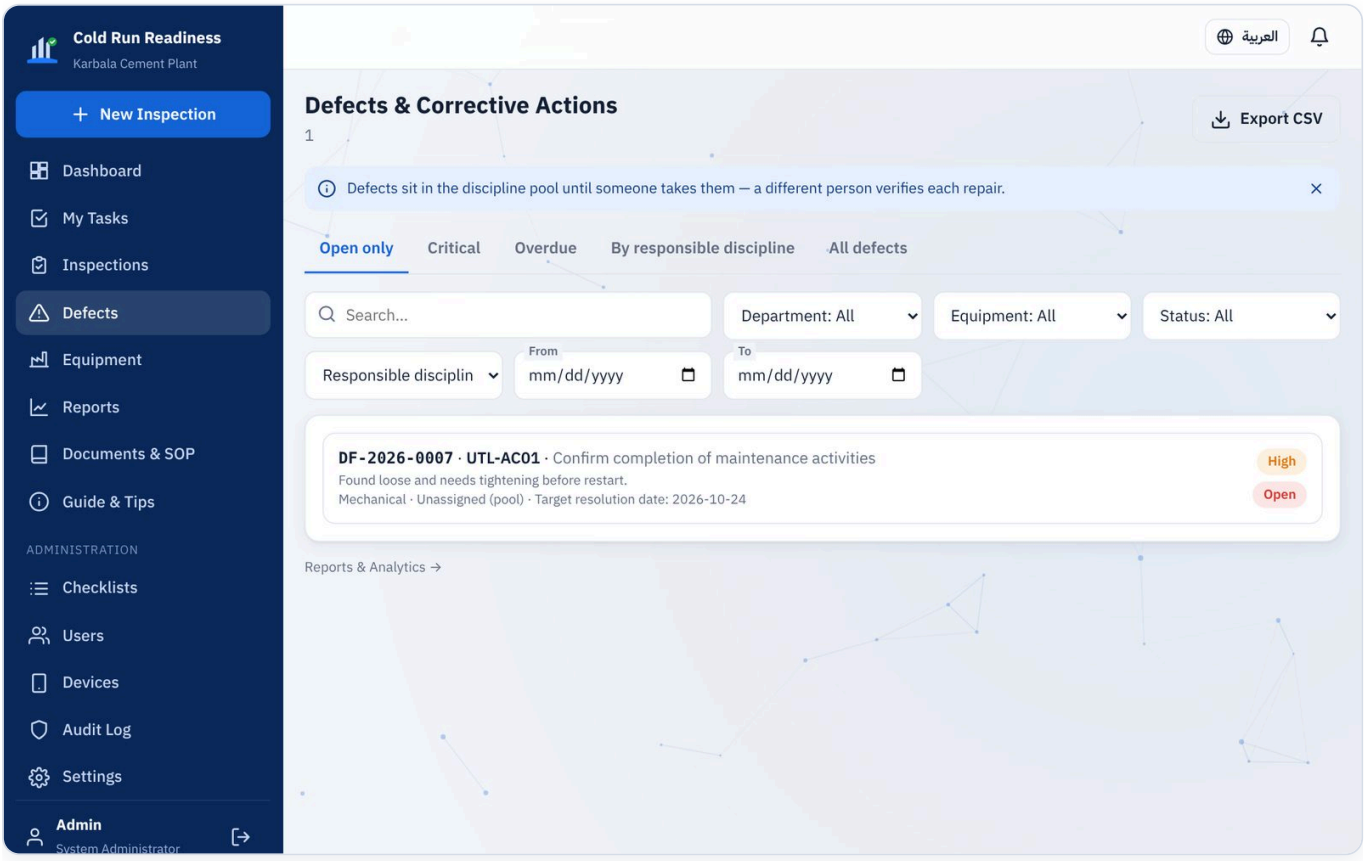

If a colleague saved the same item at the same moment, you are shown their version and can keep theirs or overwrite with yours.

8 Defects and repairs

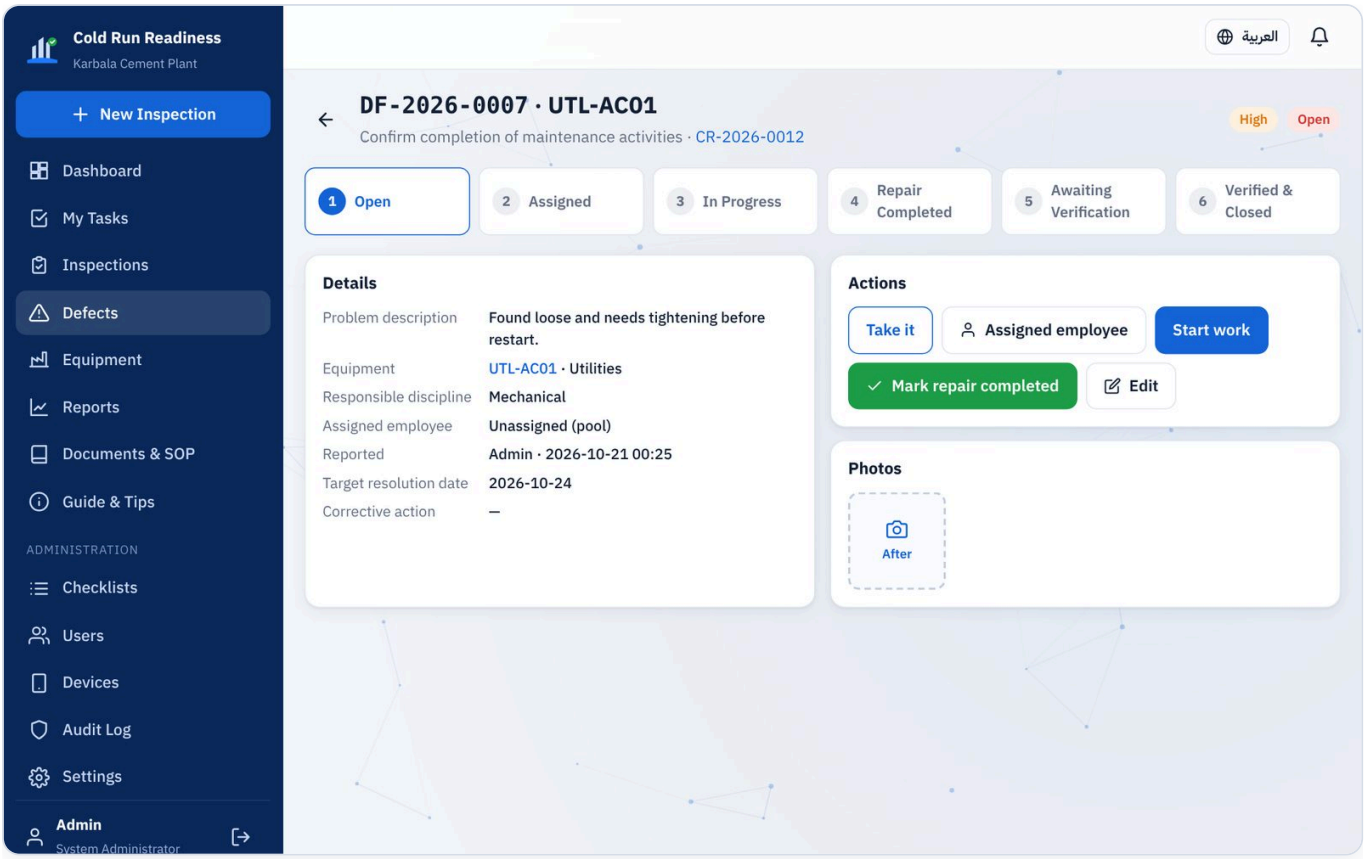

For Everyone except viewers

Each defect has a code, severity, responsible discipline (pool), target date and status: **Open → Assigned → In Progress → Repair Completed → Awaiting Verification → Verified & Closed**.

1. Find it in **My Tasks** or **Defects**. Take it, or a supervisor assigns it to someone.
2. Press **Start work**, repair, then **Mark repair completed** with a short note of what was done.
3. A supervisor, manager or administrator — **not the person who repaired it** — checks the repair: **Verified — close**, or **Verification failed — reopen**.
4. After closing, re-inspect the original checklist item so the inspection can move on.

Defects & corrective actions

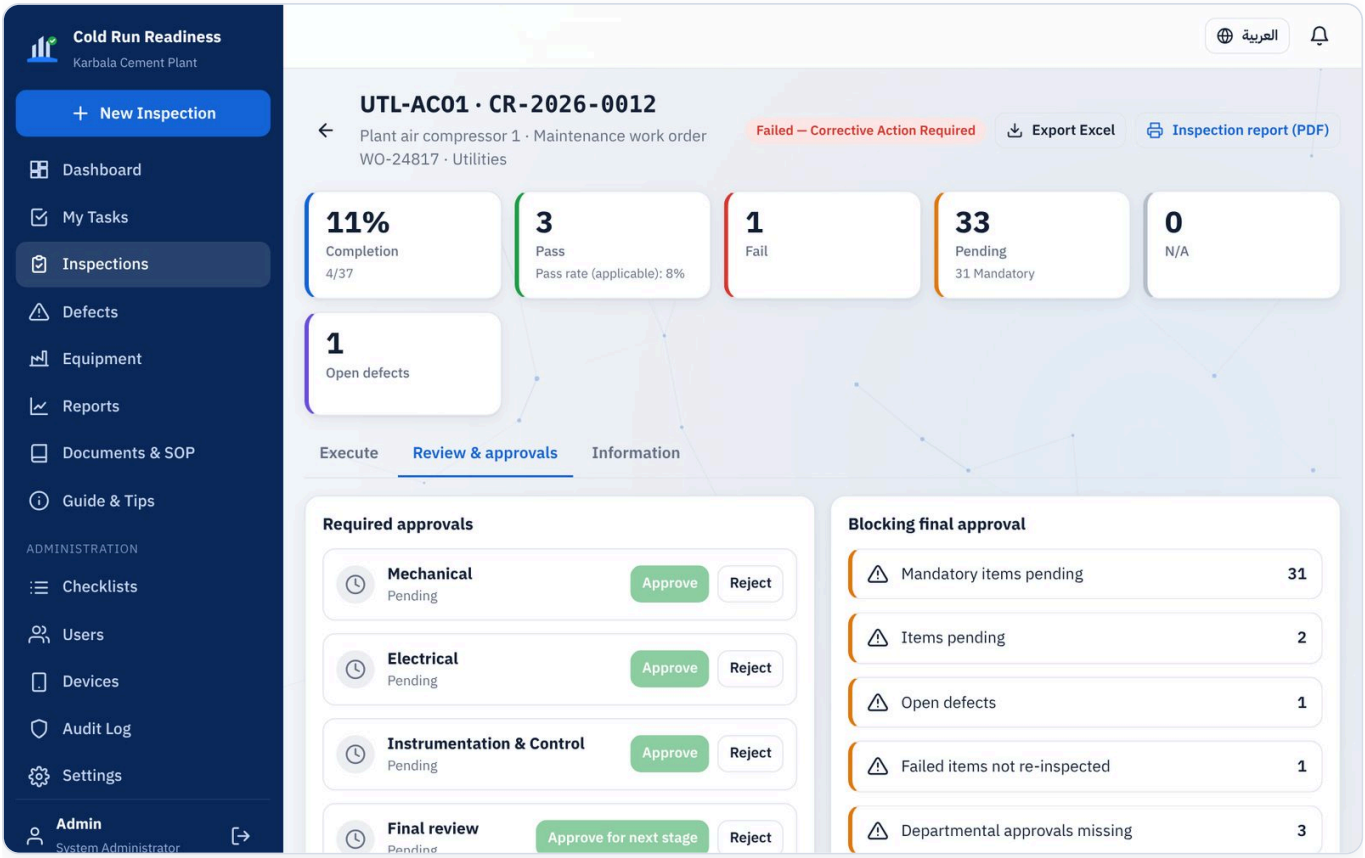

A defect with its history and actions

9 Sign-offs and final approval

For Engineers (own discipline), managers, supervisors, administrators

1. Open the inspection → **Review & approvals**. The **Blocking final approval** list shows exactly what is still missing.
2. Each required discipline presses **Approve** (or **Reject** with a reason).
3. When nothing blocks, a supervisor, manager or administrator presses **Approve for next stage**.
4. The completion report goes out automatically: the chosen recipients are notified in the app and receive the Excel results by e-mail.

Review & approvals

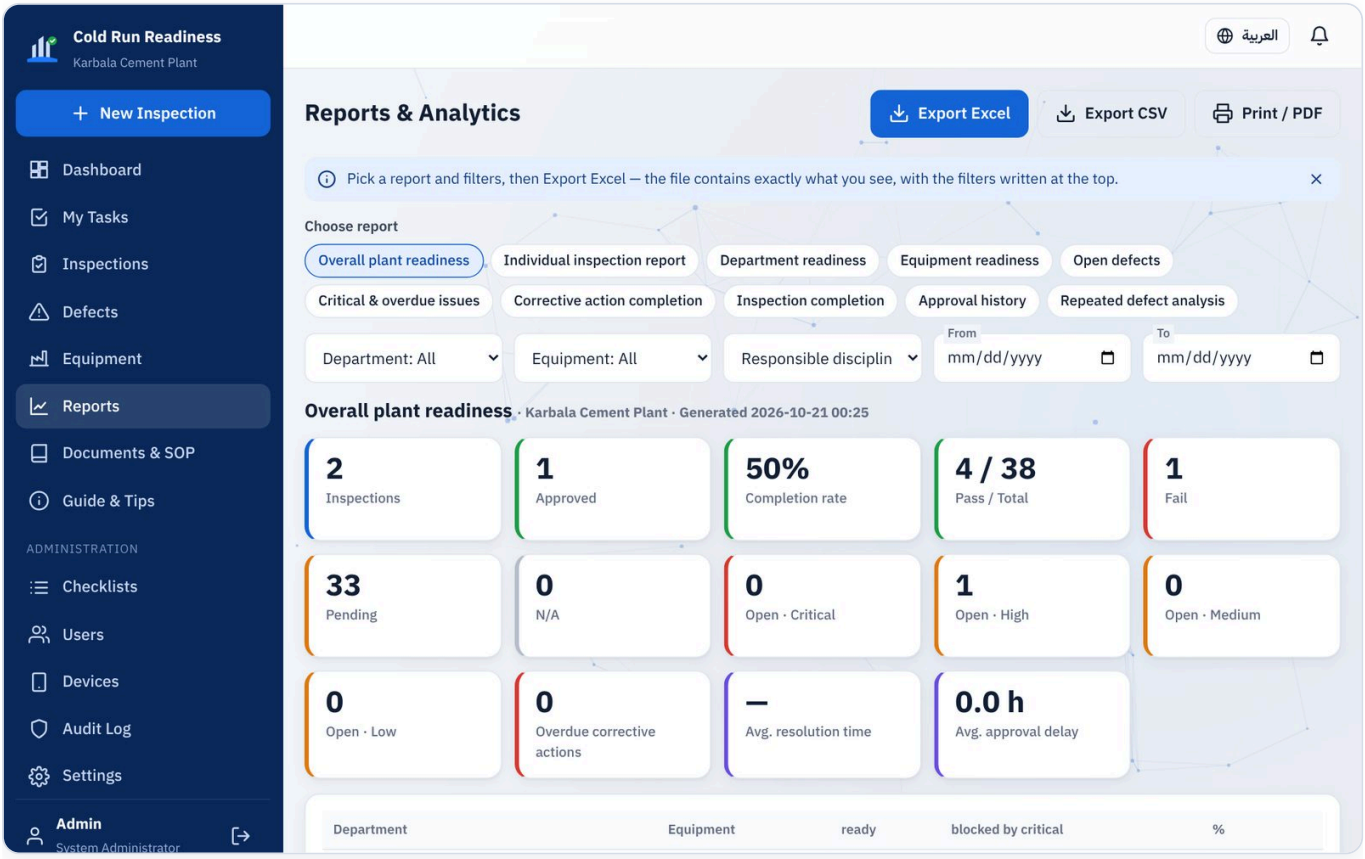

Important **Documented override** (roles chosen in Settings): approve despite critical items only under an approved plant disposition. A written justification of at least 10 characters is required and recorded in the audit log.

An approved inspection can be **reopened** by a lead with a reason; it then goes back through the steps above.

10 Reports and Excel

For Everyone

1. Open **Reports** and choose a report: plant readiness, department, equipment, open defects, critical & overdue, corrective-action completion, inspection completion, approval history or repeated defects.
2. Set the filters (department, equipment, dates, discipline).
3. Press **Export Excel**. The file contains exactly what you see, with the report name, date and filters written at the top.

Reports & analytics

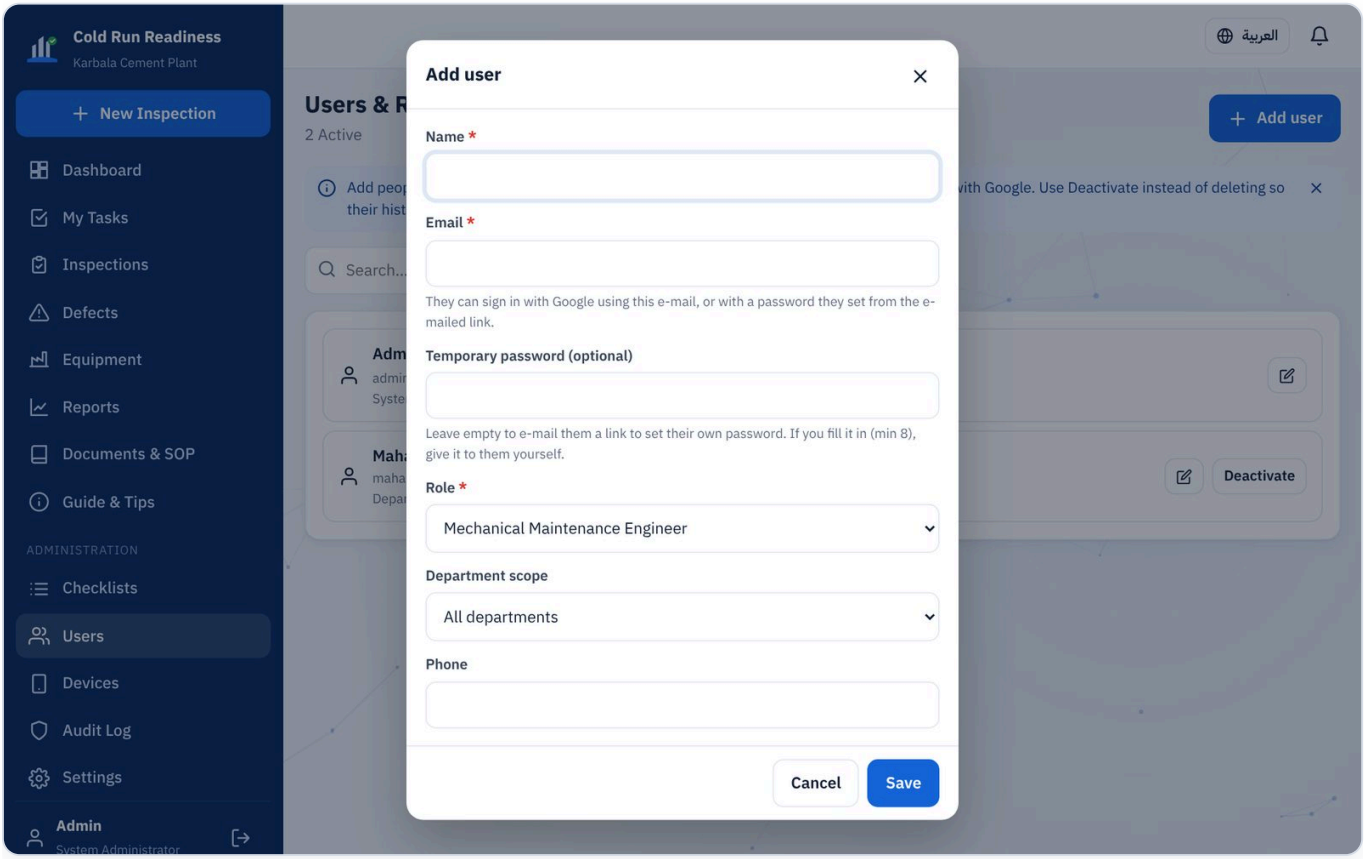

On any inspection, **Export Excel** gives one workbook with four sheets — Summary, Results, Defects and Approvals — and **Inspection report (PDF)** opens a printable report for signatures. In Arabic the sheets are right-to-left.

11 Administration: people and access

For Administrators

Add a person

1. **Users → Add user**.
2. Enter name, e-mail, role, department scope and phone. Leave the password empty.
3. Press **Save**. They receive an e-mail to set their password, or can simply use **Sign in with Google** with that e-mail.

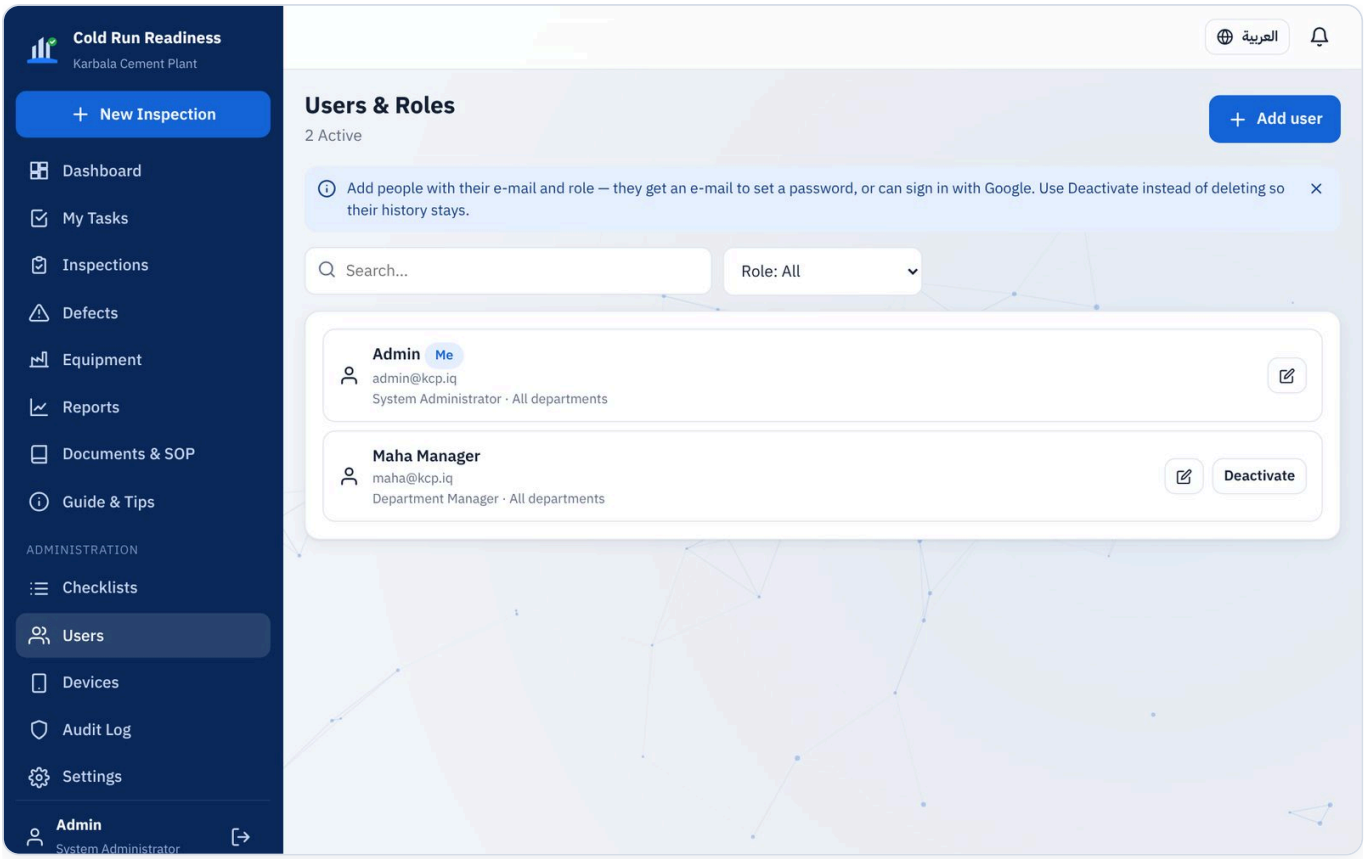

Add user

If the e-mail already has a login (for example the person tried Google first), an **invitation** is saved instead. It appears under **Pending invitations** and turns into their account the next time they sign in. You can **Resend e-mail** or cancel it.

Change, deactivate, hand over

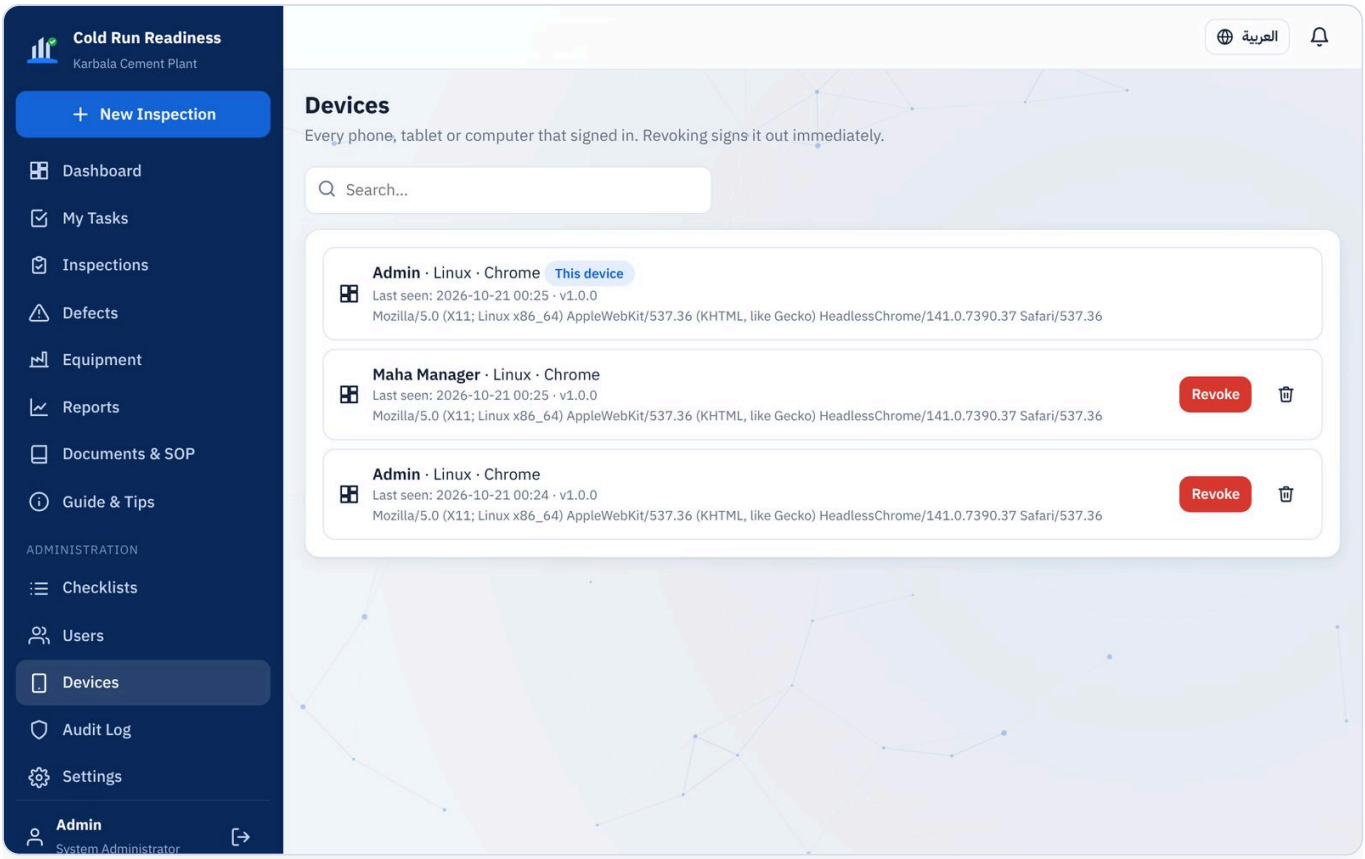

1. Press the pencil to change role, department or phone, or to **Send password reset**.
2. When someone leaves: **Deactivate** — they are signed out at once and cannot sign in again; their history stays.
3. **Reassign open work** returns their defects to the pool so colleagues continue.

Users & roles

Devices

Devices lists every phone, tablet and computer that signed in. **Revoke** a lost or shared device and it is signed out immediately; **Allow again** undoes it.

12 Administration: equipment and checklists

For Administrators

Departments and equipment

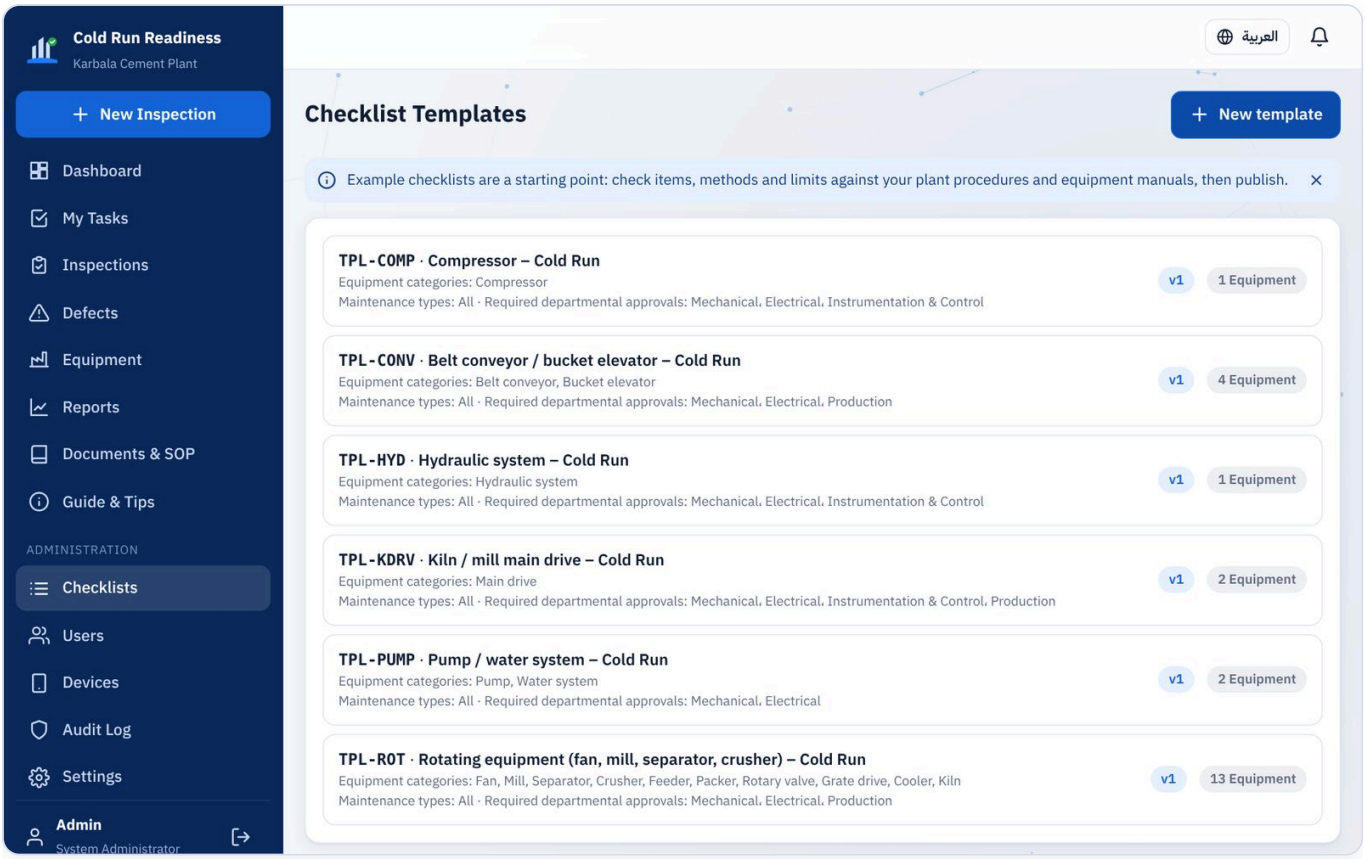

1. **Equipment** → **Add department** for each plant area.
2. **Add equipment**: unique tag, name in both languages, department, category, location and maker. The **category** decides which checklist is used.
3. Open any equipment to see its history: previous inspections, repeated defects and earlier readings.

Equipment & departments

Checklists

1. **Checklists** → **New template**, or open an existing one.
2. Choose the equipment categories, maintenance types and required departmental approvals.
3. Add sections (one discipline each) and items: mandatory, critical, measurement unit and limits, photo required, N/A needs reason, guidance and procedure reference.
4. Press **Publish new version** and describe what changed. Published versions never change, so old inspections keep their original checklist.

Checklist templates

> **Important** Starter checklists are examples. Check every item, method and limit against the approved plant procedures and equipment manuals before using them.

13 Administration: settings, reports, backup

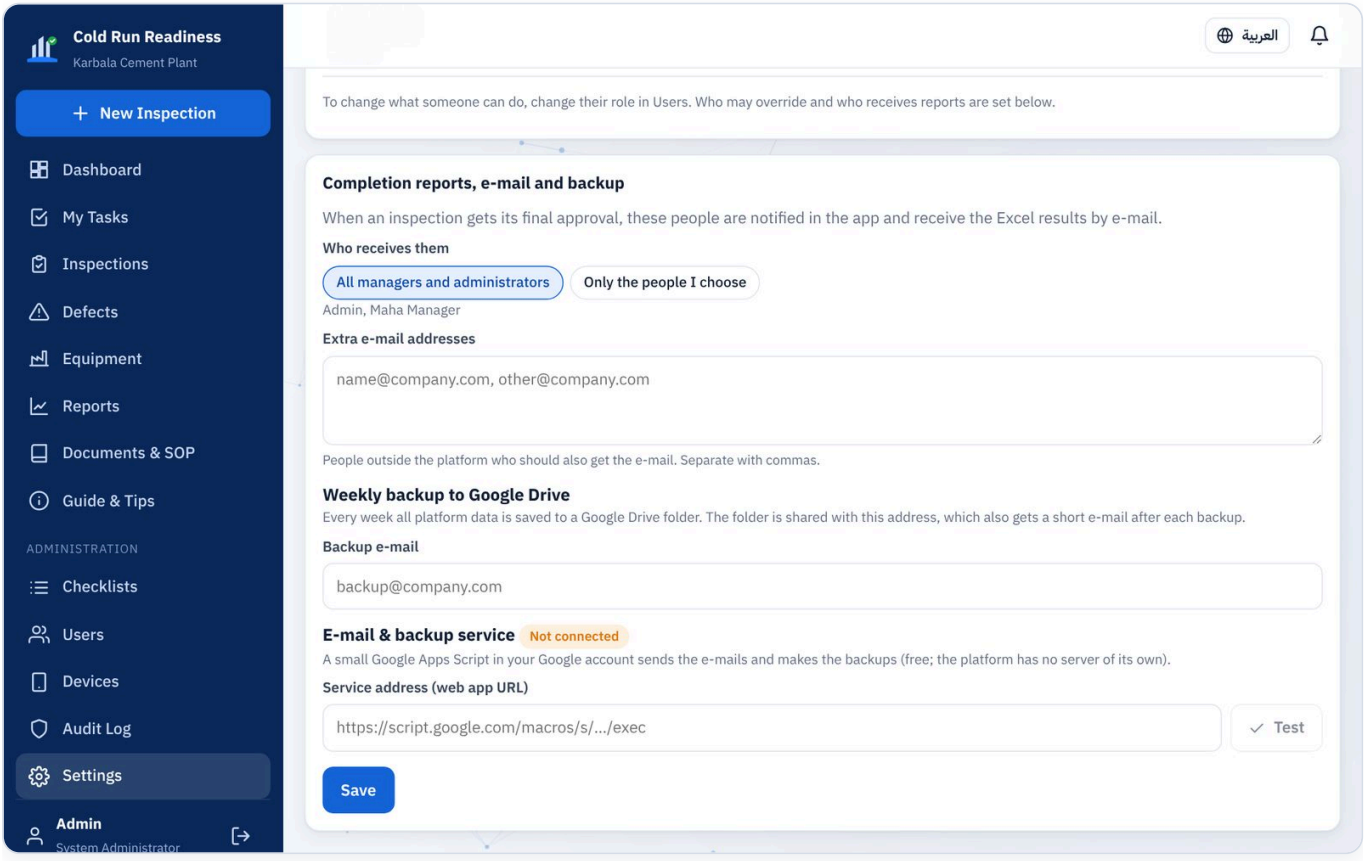

For Administrators

System settings

Plant name (both languages), shifts, maintenance types, equipment categories, the roles allowed to make documented overrides, and default target days per defect severity.

Completion reports, e-mail and backup

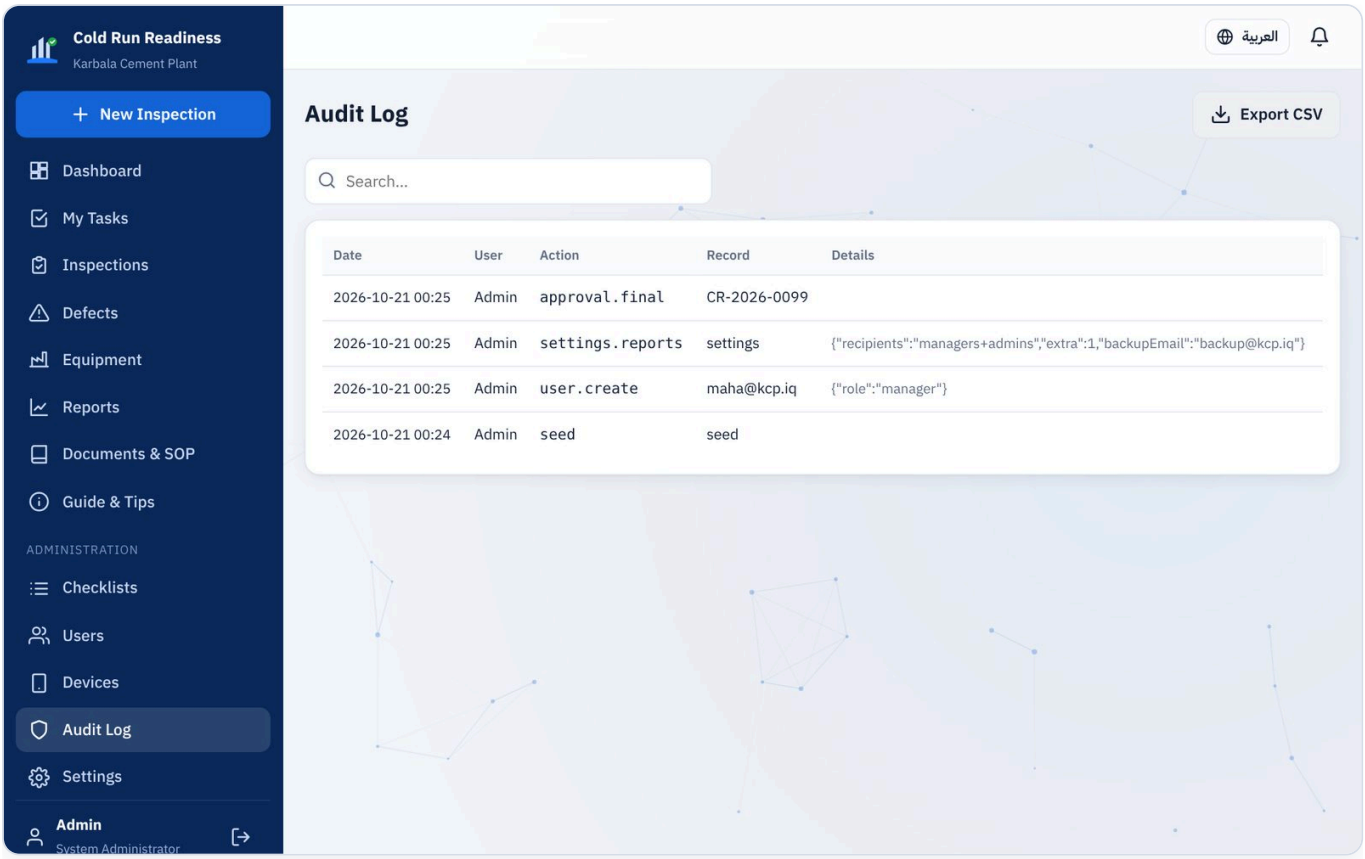

1. **Who receives them:** all managers and administrators (default), or only the people you tick.
2. **Extra e-mail addresses:** people outside the platform, separated by commas.
3. **Backup e-mail:** the weekly Google Drive backup folder is shared with this address, which also gets a short e-mail after every backup.
4. **E-mail & backup service:** paste the service address once (see the next section) and press **Test**; the badge turns **Connected**.

Completion reports, e-mail and backup

Audit log

Every important action — sign-offs, overrides, user changes, settings — is recorded with who, what and when. Nobody can edit or delete it.

Audit log

14 One-time setup of e-mail and weekly backup

For The platform owner (once)

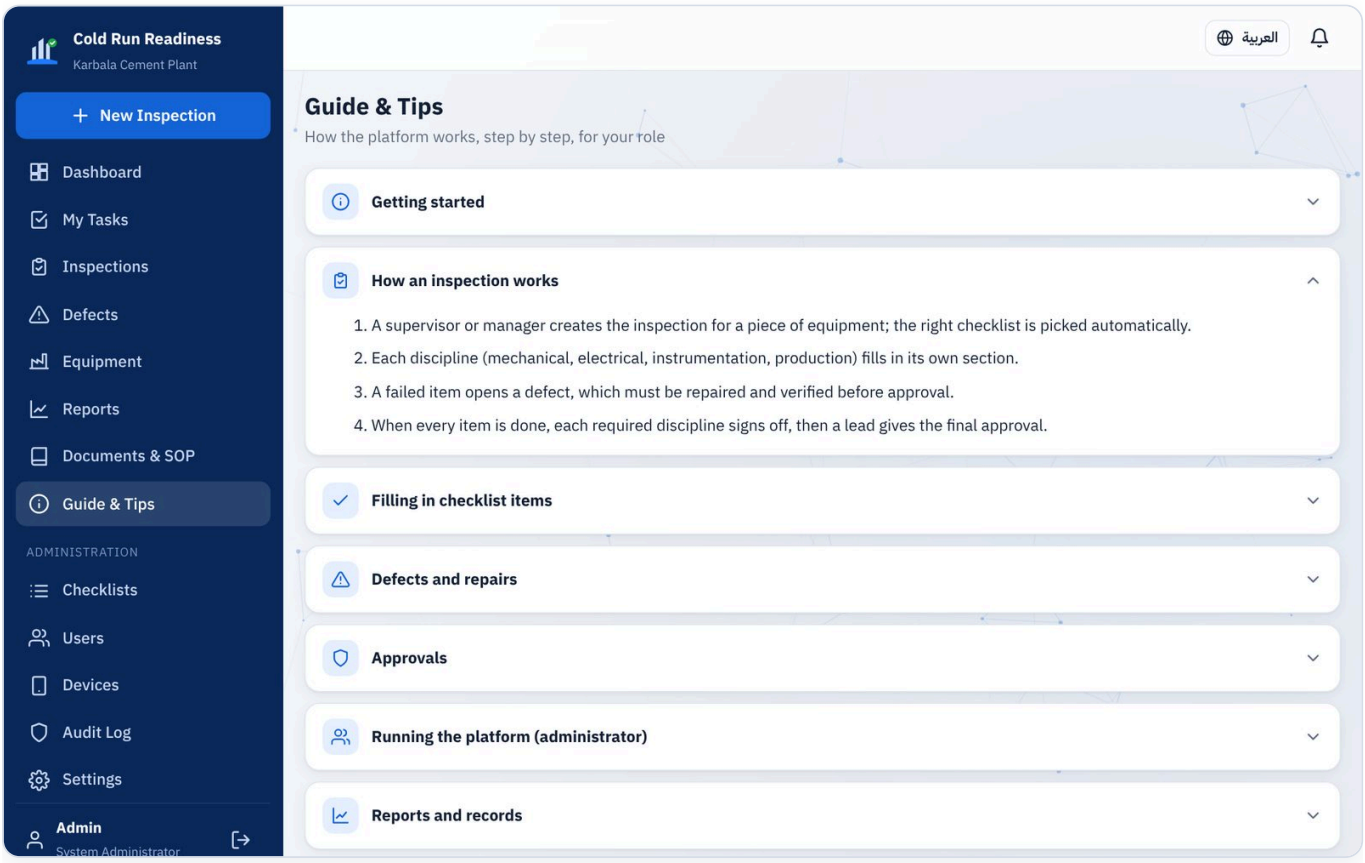

The free plan has no server, so a small Google Apps Script in the owner's Google account sends the e-mails and makes the backups. It checks every request against the platform: a valid sign-in, an active lead or administrator, an approved inspection — and it only sends to the recipients in Settings.

1. Open **script.google.com** → **New project**. Name it "KCP Cold Run service".
2. Replace the code with **Code.gs** from the folder **platform/email-backup-service**. In Project settings tick "Show appsscript.json" and replace it with the file of the same name.
3. Choose the function **setup** and press **Run**; allow the permissions it asks for. This schedules the weekly backup (Fridays, 02:00).
4. **Deploy** → **New deployment** → **Web app**; Execute as **Me**, access **Anyone**. Copy the URL ending in **/exec**.
5. In the platform: **Settings** → **E-mail & backup service** → paste the URL → **Test** → **Save**.

> **Tip** Backups are kept in Google Drive → "KCP Cold Run backups", one dated folder per week, newest 12 kept. Each collection is a JSON file; README.txt lists the record counts.

15 Help inside the platform

Guide & Tips in the menu explains every step for your role. Short tips appear at the top of the main pages; close one with ✕. To see them again, open Guide & Tips → **Show all tips again**.

Guide & Tips

16 Good practice and security

1. Use your own account. Never share passwords; on shared tablets sign out at the end of the shift.
2. Lost phone? Tell the administrator — they revoke it in Devices.
3. Before leaving an area without signal, wait for the sync icon to disappear once you are back online.
4. Record facts: readings, photos and clear descriptions. Everything is signed with your name and time.
5. Administrators: deactivate leavers the same day and review the audit log regularly.

> **Important** The platform documents readiness only. Starting equipment always follows the plant's LOTO, permit and operating-authorization procedures.

17 Questions and problems

Problem	What to do
"Your account has no profile yet"	The administrator has not added your e-mail yet. Ask them to add you with the exact e-mail you use.
"Your account is deactivated"	Contact the administrator.
"This device was signed out by the administrator"	The device was revoked. Ask the administrator to allow it again.
No password e-mail	Check spam. Use "Forgot password?" or ask the administrator to resend it.
Google window does not open	Allow pop-ups for the site in the browser, then try again.
A button is greyed out	Your role does not allow it, or something still blocks it — the inspection page lists the blockers.
Approval says the e-mail could not be sent	Management was still notified in the app. Export Excel and send it manually; ask the administrator to press Test in Settings.
Data looks old on one device	Check the connection. As a last resort: Settings → Clear local cache & sign out.
